DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the receiving C/A signal, generating complex signal, multiplying, dividing, adding, applying Fourier transformation, applying inverse fast Fourier transformation and all other features in the claim must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claim 1 is objected to because of the following informalities:
- a) On line 10, recitation: "adding data" should be changed to -- adding data signals -
-.
- b) On the last line, recitation: " the initial phase" should be changed to -- an initial
phase--.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
- The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being
indefinite for failing to particularly point out and distinctly claim the subject matter which
applicant regards as the invention.

Regarding claim 1:

- a) Recitation: "N ms", wherein "N" is not defined as if it is an integer or any random
numbers.
- b) On line 12, recitation: "considering" is indefinite and confusing. It is not clear if it
refers to digitized C/A code or a preselected GPS satellite, and how is
"considering" function in according to the claim.

Art Unit: 2634

c) Regarding claim 2, recitation: "said multiplying step" is confusing as if it refers to the first multiplying step or the second multiplying step.

d) Regarding claim 3, recitation: "said multiplying step" is confusing as if it refers to the first multiplying step or the second multiplying step.

5. Claim 1 recites the limitation: "output of said multiplying step", "output of said adding step", "output of said considering step", "output of said second applying step", "output of said taking step", "output of said first applying step", and "output of said second multiplying steps". There are no claim limitations indicating output being produced at each step. Therefore, there is insufficient antecedent basis for these limitations in the claim.

6. Claim 6 recites the limitation: "output of said considering step". There is insufficient antecedent basis for this limitation in the claim.

7. Claim 7 recites the limitation: "output of said second multiplying steps". There is insufficient antecedent basis for this limitation in the claim.

8. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: on line 11-12, the relationship between first applying a fast Fourier transform to considering 1ms of digitized C/A code.
